

Executary[®] Transcribing Unit

IBM Executary® Transcribing Unit

Makes the executive secretary's job more rewarding by simplifying routine transcribing jobs. Automatic tuning is combined with speed and tone control. Allows the secretary to adjust to the most comfortable transcribing pace. Foot-activated pedal allows the typist to start, stop, review and forward space without taking fingers from the keyboard.

\$520. —

Efficiency.

The typist or secretary hears what you said... just as you said it... in your normal speaking tones. And without annoying surface noises that can cause time-wasting delays. Everything you said is reproduced clearly and distinctly. The transistorized amplifier in the IBM "Executary" Transcribing Unit is specially designed to assure high fidelity in playback.

Convenience.

Even typists totally unfamiliar with the IBM "Executary" Transcribing Unit will find it so easy to use. The unit's built-in controls enable the operator to set a pace easy to handle. Automatic Word Recall enables the typist to hear the last few words of the sentence previously typed. Audible scanning makes it possible to locate any word or phrase in seconds. The clear, visible indexing helps the operator to set up letters perfectly on the page.

Quality.

The IBM "Executary" Transcribing Unit is engineered to meet all of your input needs with a minimum of down-time or service calls. Built-in quality features include true voice reproduction—clear, distinct and without annoying surface noises. This improved fidelity makes it possible for the typist to complete your work with a minimum of time-consuming questions.

Compatible.

The reusable 3" Magnabelt used with the unit is totally interchangeable with all Input Word Processing equipment in the IBM line. It can be utilized from unit to unit... unit to system... even system to system.

Features
